

Cat. Nos. 0570 Series Gas Tank Vent INSTALLATION INSTRUCTIONS

Read all directions before proceeding.

- Tank vent must be installed in accordance with U.S.C.G. Safety Standards for Boat Gasoline Fuel Systems, #33CFR183 and A.B.Y.C. Standard H-24.
- 2). Locate mounting surface with thickness up to 1/2 inch maximum.
- 3). Drill 3/4 inch diameter hole in mounting surface.
- Make sure vent head is tightened against threaded end of vent neck to insure proper seal.
- Remove nut and washer, insert vent neck in mounting hole, and apply bedding compound around outside of mounting hole.
- Attach washer and nut; tighten securely.
- 7). Attach vent hose to barbed end of vent neck, and secure with a hose clamp.
- To pressure test fuel system, remove splash guard, and attach optional orange test cap (Cat. No. 0101).
- 9). Remove test cap, and reattach splash guard after pressure testing.
 - (1). American Boat & Yacht Council, Inc.(2). U.S. Coast Guard
